

# VAPYR-900

## Compact Haze Machine

Item ref: 160.488UK

User Manual

Version 1.0

Caution: Please read this manual carefully before operating  
Damage caused by misuse is not covered by the warranty

## Introduction

Thank you for purchasing the VAPYR-900 haze machine. This product has been designed to provide controlled haze effects for stage productions and themed events. Please read and keep this manual in order to achieve the best results from this equipment and avoid damage through misuse.

## Unpacking

The product should arrive with you in good condition with the following components.

- VAPYR-900 haze machine
- Wireless remote control
- Mains lead(s)

If you find any accessory is missing or the machine has arrived with any problems, please contact your local dealer at once. Please keep the original package and invoice for any possible replacement or returned demand.

## Warning

To prevent risk of fire or electric shock, do not expose electrical parts to rain or moisture. If liquids are spilled on areas other than inside the fluid tank, disconnect the mains, allow the VAPYR-900 to dry out and have it checked by qualified personnel before further use. Avoid any impact, dropping or extreme pressure to the housing. No user serviceable parts inside - do not open the case. Allow the VAPYR-900 to acclimatize to room temperature before operating.

## Placement

The VAPYR-900 has a built-in fluid container and should be operated in an upright position. Ensure that the VAPYR-900 is positioned on a stable, non-slip surface.

## Safety

- Check for correct mains voltage and condition of IEC lead before connecting to mains
- This unit must be earthed
- This unit uses a heating element – be aware that parts of the housing may be hot in use!

## Cleaning

- Use a soft dry or slightly damp to clean the casing
- Do not use strong solvents for cleaning the housing
- Clean the haze mechanism periodically by operating with distilled water instead of haze
- It is also recommended to use fog machine cleaning fluid (160.670UK) periodically

## Recommended fluid

For the VAPYR-900 haze machine, we strongly recommend the following fluid which has been specifically formulated to perform best with any heater based haze machines.

QTX ref code	Description	Size
160.591UK	High quality professional haze fluid	5 Litre
160.596UK	Eco haze fluid	5 Litre

## Use power supply with Earth connection and adequate current capacity for the unit

Use the plug to connect to the main power supply as follows:

Wire	Connection	International signal
Brown	Live	L
Blue	Neutral	N
Yellow /Cyan	Earth	

## Rear panel

- 1 LED display
- 2 4 button control panel
- 3 DMX output (3-pin XLR)
- 4 DMX input (3-pin XLR)
- 5 Power on/off switch
- 6 Remote connection (5-pin DIN)
- 7 IEC mains inlet & fuse holder

## Setting up

1. Unpack the VAPYR-900 unit.
2. Unscrew the top cap of the tank and remove to fill with haze fluid.
3. Replace the bottle and screw the cap securely, making sure that the pipe is fed down to the bottom of the bottle to ensure a consistent flow of fluid.
4. If required, connect the remote control via the 5-pin DIN socket.
5. If DMX is to be used for control, connect the DMX signal from the controller to the DMX IN XLR connector. Any further DMX controlled units may be connected via the DMX OUT XLR connector.
6. Connect the IEC mains plug and switch the power on.
7. Heat up time is as little as 35 seconds before the VAPYR-900 is ready to use.

## Operation

To operate the VAPYR-900 in standalone mode, use the 4-button control on the rear panel beneath the LED display as follows.

Press MODE	Press ▲▼ and ENTER	Function
<i>R---</i>	<i>R001 - R512</i>	DMX start address 001 to 512
<i>o---</i>	<i>o000 - o255</i>	Haze output 0 – 100%
<i>F---</i>	<i>F000 - F255</i>	Fan speed slow to fast

Adjust the fan speed and output to the required output consistency.

It is important to note that the Zephyr uses an efficient fast heating element and will take around 1 minute to clear the fluid from the heater after hazing has stopped.

To avoid malfunction, do not remove the remote control when the unit is switched on and do not switch power off until haze output has stopped.

Direct control is available using the wired timer remote control, as described below

- DURATION** Sets the length of time of haze output compared with the "off" interval
- OUTPUT** Sets the volume of haze output
- FAN SPEED** Sets the output fan speed  
(faster makes haze more dispersed)
- TIMER ON/OFF** Activates the timer program  
(as set by DURATION and OUTPUT)
- CONTINUOUS** Latching button for haze on or off
- MANUAL** Non-latching button for haze on or off

If the display is showing the DMX address, the VAPYR-900 will operate from DMX control as follows.

Channel 1 (start address)	0	Off
	1-255	Haze output 1-100%
Channel 2 (start address + 1)	0-255	Fan speed slow to fast

## Specifications

Power supply	220-240Vac, 50Hz (IEC)
Power consumption	900W
Fuse	F5AL
Fluid capacity	1.2 litres
Warm up time	30-40 seconds
Haze output (approx.)	5000 cu ft (142m <sup>3</sup> ) /min
Connections	DMX in and out (3-pin XLR), Remote (5-pin DIN), IEC
Controller	Onboard digital control panel, timer remote or DMX512
DMX channels	2
Dimensions	305 x 300 x 225mm
Weight	4.75kg

## Troubleshooting

Warning: Hot components! ... Switch off and allow to cool before touching the unit.

No light on mains switch or remote	Check mains voltage is correct and socket is switched on
	Check IEC lead is OK and connected properly
	Check mains fuse in IEC connector and fuse in plug top
	If fuse blowing repeatedly, refer to qualified service personnel
Green light is on but no haze output on manual or continuous mode	Check fluid level in tank
	If fluid is OK and pump working, the lines may be blocked
	Check that output is not set to zero on the control panel or remote
	If blocked, clean with fog machine cleaner & distilled water
	Check that if DMX mode is selected, the DMX channel is correct
	In DMX mode, check that haze output is not set to zero

**Disposal:** The "Crossed Wheelie Bin" symbol on the product means that the product is classed as Electrical or Electronic equipment and should not be disposed with other household or commercial waste at the end of its useful life. The goods must be disposed of according to your local council guidelines
